☐ Novelty and Inventive step

This application relates to the problem that there is a luminance difference between the upper half and lower half which is easily recognized along the disconnection line in the conventional dual scan LCD. The solution of claims 1, 3 - 8, 10, 11 is provided with a LCD which has 3 gate line blocks, wherein the 2nd gate line block has the disconnections of data lines characterized by the fact that the said disconnections are distributed randomly.

D2 indicates the problem that the divided points in the column address conductors are recognized when the column address conductors are divided around the middle of the column address conductors in case that a panel is divided by $2(1 \sim K, K+1 \sim M)$. Also And D2 also teaches that a panel is divided by $3(1 \sim K, K+1 \sim K+x, K+x \sim M)$ and the breaks of the column address conductors of the area $(K+1 \sim K+x)$ are irregularly arranged.

Therefore, the subject-matter of claims 1, 3 - 8, 10, 11 is not considered to be new, nor involve an inventive step.

☐ Industrial applicability

The subject-matter of all the claims meets the criteria of PCT Article 33(4) because it is industrially applicable.
